57 Mesh Instructions

This Kit is Sold As Replacement Grills Only

**DO NOT USE THIS KIT TO ADAPT ANOTHER
BRAND OF 5x7" SPEAKERS TO YOUR BIKE!**

Damage To Inner Fairing WILL Occur If Factory (OE) Screws Are
Used To Attach The Plastic Grill Rings To Your Fairing!

Hogtunes Assumes ZERO Responsibility For This!

**Please choose the install option below for
the speakers currently in your bike**

Option 1: If you already have Hogtunes 5x7" speakers in your bike

With the outer fairing removed, you will remove the speakers from the grills and put aside. The grills can now be removed from the bike. Put the new grills in place and attach to the fairing using the screws and "speed nut" just removed. The speakers will now bolt back into your new grills. NOTE: The screws that came with your Hogtunes 5x7's are correct for these grills and will not damage inner fairing.

Option 2: If you DO NOT have Hogtunes 5x7" speakers in your bike

Hogtunes 57 Mesh grills are made up of a plastic "ring" and stamped metal mesh. The mesh is secured to the plastic ring with double sided adhesive. Carefully separate the metal mesh from the plastic ring. With the current speakers and grills in your bike removed, you will have separate the grill from the ring currently in your bike. The 57 Mesh grill will have enough "tack" from the double sided adhesive to stick to the grill frame you currently have. Re-install the grill frames with the mesh attached, and re-install your speakers.
