XM Antenna Mounting Suggestion

On Hogtunes 2008 Ultra, we use a Harley branded GPS (Garmin 550) with the optional XM Sat Radio Module. After a lot of messing around trying to get what we felt was the best XM reception, here is what we came up with. Using some metal “strapping” we made a “L” bracket that attaches to the back of the radio using the screw that helps secure the top plate of the radio to the body of the radio. This is shown in the yellow circle. Is hard to see, but the orange circle is highlighting the other mounting “ear” which had to be cut for the fairing to go back on the bike. The bike resides in Central Ontario Canada, and has been ridden all over the US Eastern Seaboard with great reception. Hopefully this helps!
